

Reporting Plan: Active Engagement

Beginning December 1st, 2023, we will begin monitoring active engagement of QI participant enrollments. PatientIQ will be developing several new reports that will allow us to easily monitor and communicate enrollment numbers with participants- one of which will be called the Inactive Report. We will use this report to monitor active engagement following the steps below:

Active Enrollment

We will define active enrollment in QI as having at least one patient enrollment every 3 months (90 days). If a clinician has met their measurement goal already, it is still expected they remain active by submitting a patient enrollment every 90 days.

Notify Clinician (and PO if applicable)

Once a clinician is added to this report, we will notify the clinician (and PO if applicable) that they are inactive and must enroll one patient within the next 30 days. If an exception request needs to be made for medical leave, extended vacation, etc. please notify us as soon as possible.

Follow Up

If the clinician does not have any enrollments after 30 days, their participation in the program and VBR will be paused. They can still rejoin at a future date.

Ongoing Monitoring

If a participant is put on the inactive list more than twice in a measurement period, they will be paused in the program.
